The **PRO series horizontal** log splitters are very robust log splitters, built to be efficient and make the splitting of longer lengths easier and more precise. Due to the smart design, they are easy to transport to different job sites as they fold up to sit behind the back of a tractor or for storage. Thanks to the hydraulic loading (available on all standard versions), the AUTOLOAD system makes it easy to move larger logs on to the bed for splitting. The fully adjustable hydraulic knife allows you to split the log with extreme precision. Once the log is split the table holds the split wood allowing the operator to pick up without the need for bending. The whole frame, as well as the hydraulic wedge, are made of non-deformable DOMEX steel, a guarantee of quality and maximum durability.

The **ROAD** extended bed versions are equipped with rear lights, large trailer wheels and removable drawbar and are used for longer lengths of timber and oversized logs.
